## EXPERIENCE

### Verizon Wireless : front-end developer

9/16 - Present

Mid-level developer tasked with maintaining and expanding upon Verizon's proprietary responsive framework. Working closely with a UX/UI team, I translate new designs and wireframes into functional front-end views for both internal and external applications and websites.

### Global Observatory for Ecosystems Services : web developer

10/13 - 3/15

Aided in the development of a carbon cycle monitoring application intended for use within government research and education. The application was developed under a joint NASA and NSF grant. My contributions included a transition from VB.NET to Django, creating jQuery plugins, and a UI redesign in Twitter Bootstrap.

### Learning Design and Technology : student developer

5/12 - 10/13

The bulk of my time was spent on two Learning Management Systems: ANGEL and Desire2Learn. While at LearnDAT I developed new techniques that expedited the conversion of courses from ANGEL to D2L using Python, and created content for said courses with the Adobe Creative Suite.

### United States Air Force : officer candidate

8/07 - 1/10

As a cadet, I was instructed in leadership philosophy, logistics, and military structure. Prior to my honorable discharge, I was awarded a position in the HPSP and ranked at the top of my class.

## KNOWLEDGE

### Development

CSS3

SASS

HTML5

JAVASCRIPT

JQUERY

PYTHON

### Design

PS

AI

ID

### Other

ArcGIS

QGIS

Premiere Pro

Lightroom

Skryim

## EDUCATION

### Michigan State University : B.S., geography

2015

After leaving the Air Force, I decided to pursue coursework in GIS with an emphasis on research and analysis. The decision resulted in the expansion of my knowledge on programming, research protocol, and physical science.
